intraocular lens
for cataract patients

LENTIS[®] Comfort

Dear Patient,

nowadays no one needs to be visually impaired because of a cataract. Modern eye surgery can remove a cataract quickly, painlessly and permanently. By treatment with a LENTIS® Comfort intraocular lens a new visual comfort can be achieved which goes far beyond the standard solution!

This advanced cataract lens fulfills the desire for more quality of vision in everyday situations, such as the daily computer work, shopping or driving a car.

For an even sharper vision:
Available as LENTIS® Comfort Toric lens for the correction of astigmatism!

The easy lens solution for you,

**if you are looking for more
than the standard treatment.**

Standard

Good distance vision
Reading glasses and varifocals necessary

The easy lens

Implantation of a monofocal standard lens is a possible cataract treatment for those who do not mind wearing glasses after their surgery; however, it is not the best solution for those who wish to become more independent from their glasses.

But the tried and tested LENTIS® Comfort lens just might be it!

solution for you

The unique optics of this lens are adjusted optimally to the intermediate range and thus have been particularly successful in meeting the demanding needs that most patients have with the results of cataract surgery.

Komfort

Sharp distance and good intermediate vision
In some cases reading glasses might be necessary

The LENTIS® Comfort offers both good intermediate as well as distance vision, due to its advanced technology.

This is especially of importance to cataract patients who want greater spectacle independence in everyday situations, such as using the computer, handling their smartphone, shopping, golfing or driving.

Generally, all people who carry out manual activities further away than reading distance will benefit from this perfectly tailored lens.

In short: The perfect lens solution for everyday situations!
